Assignment 2

6. Practically Assignment 2 cannot be started by 6/3/2022 if the project 1(Assignment1) starts earlier than 05/31/2022 then assignment 2 can start on 06/03/2022 with same resources used after their tasks completed on project 1. It takes lot of time to complete both project under this scenario which is not more suitable for software engineering approaches.

7. It is Feasible theoretically to complete the project (Assignemt2) in three weeks after finishing Project1(Assignment 1) by assigning more resources and it is not practically possible due to Crash Point. Where Increase in number of resources can diminish the final goal.

Network Diagram for Assignment2(Project2)
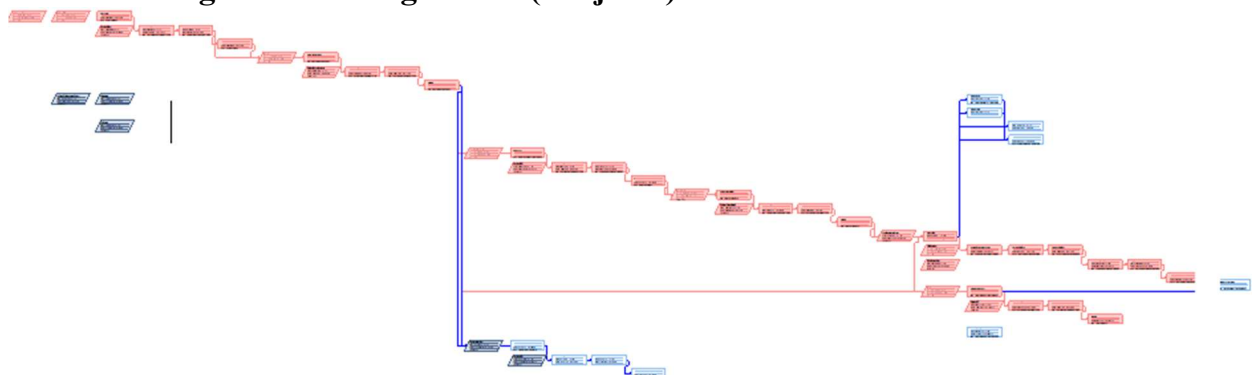

Task activities / Task dependencies:

1. Testing should start as soon as coding is finished.
2. In Lab and Environment setup, Software installation is started only after Hardware is installed.
